Study Sounds Alarm on How Time and Other Factors Affect Soil Drying on Medical Devices

Industry experts Terra A. Kremer, Christopher Carfaro and Susan Klacik designed a peer-reviewed study to investigate how long it takes soil to dry or alter (denature) and absorb into the device material and whether environmental conditions, such as temperature and humidity, contribute to the denaturing process. The findings were alarming.

CONTENTS

SEPTEMBER / OCTOBER 2023

60 | Instrument Whisperer

Tissue and dressing forceps and retractors, both self-retaining and handheld, play a vital role in surgical treatment and outcomes and must be carefully inspected after every use. Unfortunately, they don't always get the care and attention they need.

66 | Leadership Lessons

When an employee suffers a personal loss, a compassionate leader who understands grief management can create the appropriate structure to educate the team on how best to support their colleague. Among the most significant roles a leader can fulfill is developing a culture where staff are encouraged to support one another and help teammates discover their resilience.
